

BLUE SATIN SEDGE

CAREX PLATYPHYLLA

THIS IS A SEDGE? VERY UNLIKE MOST OF ITS GENUS, THE WIDE, WIDE BLADES OF BLUE SATIN SEDGE, ALSO KNOWN AS BROAD LEAF SILVER SEDGE, MEASURE UP TO 2" WIDE. THE POWDER BLUE SEERSUCKER CLUMPS CREATE A LUSH-TEXTURAL ADDITION TO THE WOODLAND GARDEN. FANTASTIC INTERSPERSED WITH FERNS AND LENTEN ROSE, WHERE THE EFFECT IS OF A COOL RAIN FOREST SETTING; CALMING TO THE PSYCHE. REMOVE OLD LEAVES BY PULLING, OR CUT THE WHOLE PLANT BACK IN SPRING TO ENCOURAGE NEW, LUSH GROWTH. BLUE SATIN SEDGE LOVES RICH, MOIST SOILS AND GLADLY TOLERATES WET ONES, BUT BECOMES MORE DROUGHT-TOLERANT WITH MATURITY. NATIVE TO THE EASTERN UNITED STATES, IT IS LISTED AS ENDANGERED IN MICHIGAN. RARE AND SPECIAL.
