

BLUEBEARD

CARYOPTERIS X CLANDONENSIS

ISN'T IT A TREAT WHEN PLANTS COME INTO BLOOM AT A TIME WHEN MOST THINGS, INCLUDING OURSELVES, ARE LAGGING? MUCH APPRECIATED BY BUTTERFLIES, BLUEBEARD'S BLUE BLOSSOMS APPEAR IN MID TO LATE SUMMER WHEN THE HEAT HAS CAUSED MANY PLANTS TO SLOW DOWN AND TAKE IT EASY. DROUGHT-TOLERANT AND HEAT RESISTANT, IT WILL BRING BEAUTY AND VITALITY TO YOUR GARDEN JUST WHEN IT'S NEEDED MOST. TRULY A SMALL SHRUB, TO 4' TALL AND WIDE, BLUEBEARD BENEFITS FROM AN EARLY PRUNING, WHICH WILL SERVE TO INCREASE PRODUCTION OF THE LOVELY BLUE FLOWERS LATER IN THE SEASON.
