

JOYCE COULTER CALIFORNIA LILAC CEANOTHUS 'JOYCE COULTER'

THIS ABSOLUTELY STUNNING CALIFORNIA NATIVE GROUND COVER SHRUB IS A BOON TO DRY SLOPES NEEDING AN EVERGREEN COVER AND STABILIZATION FAR MORE REFINED LOOKING THAN MANY DROUGHT TOLERANT PLANTS WHO'S APPEARANCE CAN BE, SHALL WE SAY, A BIT RUGGED, JOYCE COULTER CALIFORNIA LILAC HAS GLOSSY, LUSH-LOOKING LEAVES AND A NEAT, CASCADING FORM. THE WHOLE PLANT BECOMES SMOTHERED WITH SWEET, 2 1/2" PERIWINKLE BLUE BLOSSOMS IN SPRING, MUCH TO THE DELIGHT OF AN ARRAY OF POLLINATORS. THE 2-3' HIGH BY 8' WIDE MOUND LOOKS VERY REFINED EVEN OUT OF BLOOM AND IS TIDY ENOUGH FOR EVEN THE MOST GROOMED OF GARDENS. QUITE DROUGHT TOLERANT, JOYCE COULTER REQUIRES LITTLE, IF ANY, SUPPLEMENTAL WATERING ONCE ESTABLISHED.

USDA ZONES 8-10

SUN TO PART SHADE
